## **DETAILED ACTION**

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claims 6 and 8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification, as originally filed, does not provide support for an opaque layer for covering an interrupted mirror finish, as recited in claim 6; nor the convex and concave surfaces being spherical, as recited in claim 8.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 6 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 6 and 7, the use of the language "a reflective mirror finish" is vague, indefinite and lacks proper nexus with respect to the language of claim 1, line 7.

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/800,104

Art Unit: 2872

6. Claims 1, 3, 5, 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimble ('666).

To the extent the claims are definite and supported by the original specification, Kimble discloses a partially transparent mirror comprising a convex surface and a concave surface (see Fig. 12), wherein the convex and concave surfaces are essentially concentric; a plurality of perforations (23, 90, 91), serving as transparent optical gaps, extend completely through the mirror (see Fig. 12), wherein such that said perforations permit images to pass completely through the mirror; and a reflective mirror finish (27) is visible from the convex surface, note Fig. 12 along with the associated description thereof, except for explicitly stating that the concave surface is non-specular.

It is well known to use non-specular coatings, such as an opaque layer, black paint layer...etc. in the same field of endeavor for the purpose of protecting a reflective layer from environmental conditions, such as moisture and/or corrosion.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the reflective mirror finish of Kimble to include a non-specular coating, such as an opaque layer or black paint layer, as commonly used and employed in the mirror art, in order to protect the reflective mirror finish from environmental conditions, such as moisture and/or corrosion.

7. Claims 1, 2, 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martin ('979).

To the extent the claims are definite and supported by the original specification, Martin

Application/Control Number: 10/800,104

Art Unit: 2872

discloses a partially transparent mirror comprising a convex surface and a concave surface (see Fig. 3), wherein the convex and concave surfaces are essentially concentric; a plurality of perforations (10), serving as physical holes or openings, extend completely through the mirror (5), wherein such that said perforations permit images to pass completely through the mirror; and a reflective mirror finish (5a) is visible from the convex surface, note Fig. 3 along with the associated description thereof, except for explicitly stating that the concave surface is non-specular.

It is well known to use non-specular coatings in the same field of endeavor for the purpose of reducing glare.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the concave surface of Martin to include a non-specular coating, as commonly used and employed in the mirror art, in order to reduce glare.

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Application/Control Number: 10/800,104 Page 5

Art Unit: 2872

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ricky D. Shafer whose telephone number is (571) 272-2320. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
